Topic Overview

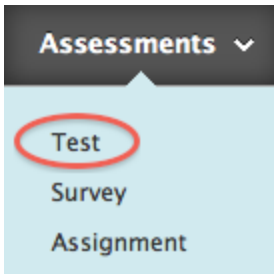

This document lists the steps necessary to create a Random Block test. A Random Block test uses only a certain number of questions from a pool of questions (ex: randomly use 5 questions out of a pool of 13) and assigns different questions per test per student.

Steps

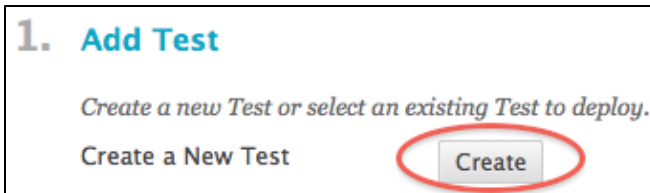

You must have an existing Pool of questions to use in order to set up the Random Block.

1. Once in your course, turn **Edit Mode ON**.
2. Click on the content area where you want to create the test.
3. Click **Assessments > Test**.

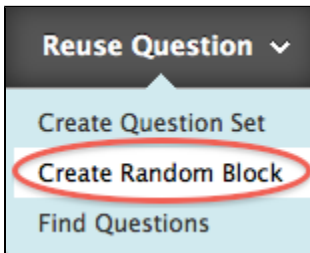

4. Click **Create**.

5. Fill out the information on the next screen and **Submit**.

6. On the **Test Canvas** page click on **Reuse Question > Create Random Block**.

7. On the **Add/Edit Random Block** page choose the **Pool** to use, **Criteria** and Click **Import**.

8. Click **OK**
