

# Listserv Performance Check

Listserv is currently set up to distribute emails on a first come first serve basis, which can cause time delays when sending mass emails or sending a message during a time a mass email is being distributed.

This form is intended to initiate a request to ITS to check the performance status of listserv for a current or scheduled listserv distribution.

Please utilize the form below to request performance status of listserv. This request form should **only** be used if one of the scenarios described below applies to your inquiry:

- 1) Determine if any mass mailings are being distributed at the time you would like to distribute your email via listserv.
- 2) Check the status of a listserv email that has already been distributed and none of the recipients have received the email.
