

Content

You can make content relevant, interactive, and accessible by including different types of learning materials and experiences. As an instructor, your content can provide online lectures, multimedia, and assessments. As you create content, you can set its options, such as availability. This enables you to create content and make it unavailable to users until you are ready for them to view it. You can create many different content types in your course areas. Advance planning of the items to include in course areas can save you time and create a more organized final product. Consider your course goals, objectives, and audience demographics.
