

Educational Technologies Advisory Council (ETAC)

Charge

This ETAC is made up of academic teaching and learning leaders, and innovators have been established to develop standards for the governance of educational technologies. Some of the focal pieces we would like to assess include technology in the classroom, computer labs, experiential learning spaces, course and content creation, student submission process, student response systems, and outcomes assessment. Through the work of this group, we seek to help the University strive towards the ability to teach and learn anywhere, anytime, and using a variety of modalities.
